

Welcome to JFE Steel (East Japan Works)

East Japan Works is an urban-type Keihin Works, and Chiba Works, the first integrated steel mill built in Japan after World War . As it strives to meet the increasingly sophisticated and diverse demands of its customers. East Japan Works has also continued to expand its site and improve its layout to achieve higher efficiency and a more harmonious relationship with the surrounding urban environment. Today, it boasts state-of-the-art technologies and equipment for the Steelmaking and production control, and is also actively involved in environmental conservation. JFE Steel has a strict resource and energy conservation program in place and is a key player in recycling waste plastics as blast furnace feed. East Japan Works is a leading example of how urban steel mills of the 21st century can live in harmony with the environment and their communities.
