

Welcome to the Chiba Campus

-Production base for integrated mill turn centers-

A key distinguishing feature of the Chiba Campus is to introduce “a cell production system”, contributing a short lead time and high quality.

In FY2007, we built an automated system for multi-item production, in which integrated mill turn centers, robots and measuring instruments are integrated.

The Chiba Campus: Advanced production system

The Machining Plant was established in 2006. At the Chiba Campus, we have established a system which produces 50 units per month of the biggest model in the NT Series (Multi-Axis Turning Centers), released in 2006.
